WHAT WE DO

EPAM offers a full suite of services for digital business, ranging from consulting and design to engineering and support. Specifically, our Insurance Practice is focused on offering the following expertise:

- **INTERNET OF THINGS**

We help our customers innovate by developing customer-centric, omnichannel IoT platforms that run on your preferred cloud partner and apply comprehensive data analytics and machine learning. This approach maximizes the impact of your new data and helps you achieve better risk assessment through predictive modeling. We can also build Augmented Reality & Virtual Reality functionality into your consumer-facing IoT platform to help breed engagement and differentiate your offering from the competition.

- **CLOUD**

Utilizing industry-leading providers, we orchestrate a cloud ecosystem that's built with security and scalability in mind. We help customers migrate core systems to the cloud to reduce technical debt and enable continuous software delivery. We leverage our 20+ years of experience facilitating a cloud journey for our customers and improve time-to-value with our proprietary tools & accelerators.

- **DIGITAL PLATFORMS**

We are a recognized leader in developing digital experiences that communicate your brand through an all-in-one omnichannel platform. Based on market research and industry trends, we create personas and develop features and functionality that motivate and anticipate the customer journey so you can stand apart from your competition.

- **BIG DATA**

Understanding your data is key to accelerating your business. Our Data Science Teams within our Big Data Practice provide assessments, strategy, integration, analytics, modeling, mining, machine learning and simulations to extract data that is more accurate and actionable. Our 200+ Big Data Engineers with MS/PhD degrees in Applied Math, Physics and Computer Science help you solve the most complex data challenges. Our solutions result in data-driven decision-making, which improves your risk assessment through predictive modeling.

HOW TO GET STARTED

Ready to optimize your data processes and start making better business decisions? Contact us today to get started with a free consultation over the phone or at your office.
