

EPAM Content Migrator for AEM

Content Migration Takes up to 40% of AEM Implementation Time

Adobe Experience Manager (AEM) is one of the most powerful enterprise content management systems on the market today, but the complexity of the implementation process can seriously impact time-to-market and, as a result, time-to-value for your business.

With content migration taking up to 40% of the overall AEM implementation time, you need a technology partner who knows how to optimize the process so you can ensure your existing content reaches its full potential within the Adobe Marketing Cloud ecosystem.

Reduce Content Migration Effort by 80% with EPAM Content Migrator for AEM

EPAM, an Adobe Platinum Solution Partner, employs a global team of over 1000 consultants who can help you get the most out of AEM through a combination of our deep expertise and catalog of prebuilt solutions and connectors.

EPAM Content Migrator for AEM is a fully realized solution that reduces content migration effort by 80% and overall implementation time by 30%, which translates to months of saved implementation time on average. Using our proprietary solution, we can greatly increase migration quality while reducing the overall cost and risk of this pivotal phase.

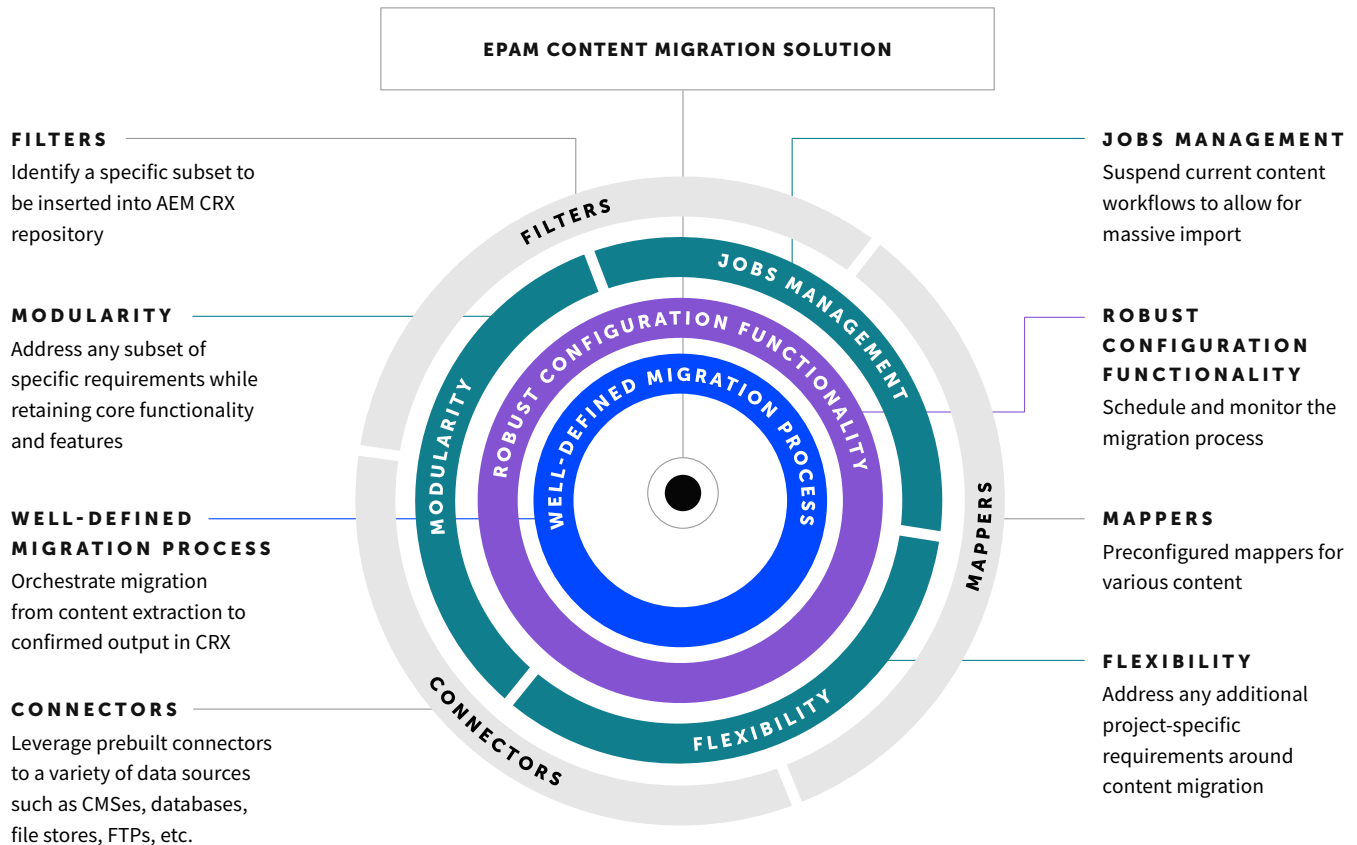

When to use EPAM Content Migrator for AEM

Whether you're just thinking about implementing AEM or you're already nearing the content migration phase, you'll want a solution that can automate the process as much as possible, especially when you're dealing with migrating:

- **Digital assets:** Massive quantities of images, documents, videos, etc. with associated metadata and taxonomy, including relational, subject and use attributes
- **Webpages:** Thousands or even millions of articles, blog posts, reviews, etc. with a similar structure/content type
- **Content flows:** Significant volumes can be aggregated and mapped from external sources to the AEM content structure on a regular basis

In addition to the above, EPAM Content Migrator for AEM is also compatible with both AEM 6.5 and AEM as a Cloud Service, extending its utility and versatility. EPAM Content Migrator supports content import from both the file system and REST API, accommodating various formats including XML, CSV, and JSON. It is capable of automating migration for all of those content sources and more, so you can rest assured you're not wasting valuable time in one of the mostly costly stages of implementation.

Automate Content Migration From any Source to AEM
