

# Providing End-to-End Support for Successful SAP HANA Initiatives

## ACCELERATE REAL-TIME ACTIONABLE INSIGHTS

As a trusted SAP Partner since 1996, EPAM specializes in not only implementing SAP HANA solutions for clients, but also developing customized SAP HANA-based products to help businesses across all verticals make decisions that are data driven and based on real-time insights. We harness the power of SAP's next-generation, in-memory technology to drive innovation for our clients, providing them with the following benefits from each SAP HANA installation:

- Unlock new growth opportunities ahead of your competition from analytics that light the path to innovation
- Take advantage of instantaneous insights that enable real-time business decisions
- Spend less time speculating and more time acting on business-critical initiatives

## ABOUT SAP HANA

SAP HANA is changing the way our clients do business with its innovative in-memory technology and intuitive design. As a fully ACID-compliant Database Management System, SAP HANA delivers an exponentially greater throughput for online transactional processing (OLTP) and online analytics (OLAP). Its ability to combine transactional and analytical data eliminates the need for aggregations, indexing, ETL and other intermediate steps in integration and development. As a result, SAP HANA users can unlock on-the-fly business intelligence capabilities through real-time data visualizations with innumerable combinations of data queries.
